

JEDDAH TOWER KSA

Practical Way Forward (JANGHO-led entry route)

Media Façade / Architectural LED + Control

Prepared for:

SAVC (Star Asia Vision Corporation)

Date (UTC):

24th Jan 2026

Prepared By:

Mohammed Vaseeuddin

Step 01: Build a “JANGHO-ready” offer (what you send first)

Goal:

Make it easy for JANGHO to say: “Yes, we can embed this without redesign pain.”

Deliverables (keep it short and technical):

1. Façade Integration One-Pager
 - Where SAVC fixtures mount inside a unitized panel
 - Cable routing concept, connector strategy, service access
2. Risk-Removal Promise (for JANGHO)
 - Factory testing plan (FAT) + panel mockup plan
 - Defined responsibilities matrix (who supplies what / who installs what)
3. Control Architecture One-Pager
 - Central server + zone controllers + network topology
 - Redundancy + fallback mode + monitoring
4. Compliance Starter Pack (KSA import + safety)
 - What documentation exists now (test reports, IP ratings, EMC, etc.)
 - What will be delivered for submittals (method statements, ITP/QCP)

Why this works:

JANGHO's biggest fear is late changes and interface blame. Your pack must show “we reduce risk.”

Step 2: Approach JANGHO using a dual-track contact strategy

Track A:

JANGHO Group HQ (Beijing)

Use JANGHO's corporate contact details (Beijing) to reach a senior group-level façade exec.

Track B:

JANGHO Curtain Wall / Middle East channel

Use the JANGHO Curtain Wall contact form (explicitly references Middle East branch).

What you ask JANGHO for (3 specific “keys”):

1. Who is the Jeddah Tower façade Project Director / Systems Manager (name + WhatsApp/email)
2. What is still buyable under the façade package (lighting channels, media zones, control/CMS)
3. A joint intro meeting with their interfaces:
 - SBG procurement/interface contact
 - Turner package/submittal coordinator
 - DAR façade engineering reviewer

Language advantage (practical):

- JANGHO is China-based; using **Mandarin** (plus English) generally improves speed and trust for early technical alignment. Your first pack should be **English + Mandarin** executive summary.
- For KSA chain (SBG/DAR/TURNER/JEC), keep everything **English-first**, and add a **1-page Arabic cover note** later for owner-level correspondence (optional but helpful).

Step 3:

While JANGHO is warming up, secure design acceptance (AS+GG + FMS)

While JANGHO is warming up, secure design acceptance (AS+GG + FMS)

AS+GG (Architect)

Contact via info@smithgill.com / phone listed.

Ask: "What is the formal path for an Approved Alternate for façade lighting/media façade components, and who signs off?"

FMS (Lighting Consultant)

Use the Contact page phone numbers and the "email us" channel (site uses an email-protection link).

Ask: "What are the acceptance criteria (uniformity, glare, dimming curves, max luminance, maintenance access) and can we schedule a mockup review aligned with JANGHO's panel?"

Forcade (Branding / Wayfinding / Digital Touchpoints)

Forcade explicitly has a Jeddah Tower project page and states they were commissioned for site-wide signage and wayfinding (5,500 signs planned). This matters if façade content/identity screens or digital touchpoints emerge.

Step 4

Use TURNER to get the "Rules Of The Game" (Submittal Routing)

TURNER's own page frames their project management services; the practical move is to ask for **the submittal workflow + package matrix** and who owns façade lighting/media reviews. Turner HQ contact: turner@tcco.com, phone listed on contact page.

Ask TURNER for:

- Submittal register template + naming conventions
- Package status: is façade lighting part of façade package (JANGHO) or MEP/ELV (SBG)
- Required mockup stages and meeting cadence

Step 5

Align with DAR early (So Compliance doesn't kill you later)

DAR Engineering provides a KSA contact presence and a formal contact form + email/phone.

Ask DAR:

- "What is the minimum compliance bundle you need for façade-integrated lighting/control equipment?"
- "Which SBC / civil defense / municipal requirements typically impact façade lighting installations?"

Step 6

Make SBG procurement ready (So you can actually be bought)

SBG has a vendor registration portal and a support contact channel (email + phone).

Practical Action:

Register SAVC (and your local integrator) in the portal immediately. Then email support: "We are a nominated façade lighting/control subsystem via JANGHO; please route us to the relevant package buyer."

“What does success look like?” (Clear Checkpoints)

10-day checkpoint (Access)

- Named JANGHO façade systems owner + confirmed technical workshop date
- TURNER confirms the submittal routing + who the reviewer set is

30 Day Checkpoint (Acceptance Path)

- FMS + AS+GG agree to evaluate SAVC as **Approved Alternate**
- Mockup definition agreed (panel sample + night test)

60 Day Checkpoint (Commercialization)

- JANGHO issues a nomination letter / internal endorsement
- SBG confirms procurement channel (façade package VO vs separate package)

Who to contact

AS+GG:

info@smithgill.com | +1 312 920 1888

FMS:

Phone contacts listed on FMS contact page (+1 212 691 3020 etc.); “Email us” exists on site

Forcade:

Contact page with phone 847-424-1010

DAR Engineering:

info@dar-engineering.com | +966 11 494 5354; contact form

Turner:

turner@tcco.com | contact page phone listed

JEC (Kingdom Holding investment page):

JEC profile + “Contact Us” entry point

JANGHO:

HQ contact (Beijing) + curtain wall contact form (mentions Middle East branch)
